JOURNAL OF MOLECULAR CATALYSIS VOL. 86 NOS. 1–3, 3 JANUARY, 1994

Contents

A Special Issue devoted to Surface Organometallic Chemistry and Molecular Approaches to Heterogeneous Catalysis

Guest Editor: J.-M. Basset

Preface 1

Stoichiometric and catalytic reactivity of organometallic fragments supported on inorganic oxides
S.L. Scott and J.-M. Basset 5

Recent developments in the surface and catalytic chemistry of supported organoactinides
M.S. Eisen and T.J. Marks 23

Molecular clusters as models of metallic catalysts
B.F.G. Johnson, M. Gallup and Y.V. Roberts 51

Palladium clusters: stoichiometric and catalytic reactions
I.I. Moiseev, T.A. Stromnova and M.N. Vargaftik 71

Surface-mediated synthesis of metal clusters
B.C. Gates 95

Surface organometallic chemistry: reductive carbonylation of $OsCl_3 \cdot 3H_2O$ supported on silica
D. Roberto, R. Psaro and R. Ugo 109

Methanation with $[Re(CO)_3OH]_4/Al_2O_3$. Evidence for spillover species
P.D. Lane and J.R. Shapley 121

Preparation, characterization, and application of fine metal particles and metal colloids using hydrotriorganoborates
H. Bönnemann, W. Brijoux, R. Brinkmann, R. Fretzen, T. Joussen, R. Köppler, B. Korall, P. Neiteler and J. Richter 129

Surface organometallic chemistry on metals: a novel and effective route to custom-designed bimetallic catalysts
J.-P. Candy, B. Didillon, E.L. Smith, T.B. Shay and J.-M. Basset 179

An approach to the mechanisms of C–C bond formation and cleavage on metal surfaces using model elementary reaction steps of organometallic chemistry
M. Leconte 205

Molecular approach to the study of the mechanisms of alkyl reactions on metal surfaces
F. Zaera 221

Alkylrhenium oxides as homogeneous epoxidation catalysts: activity, selectivity, stability, deactivation
W.A. Herrmann, R.W. Fischer, M.U. Rauch and W. Scherer 243

Catalytic oxidation and ammoxidation of propylene. Modelling studies on well-defined molybdenum complexes
J. Belgacem, J. Kress and J.A. Osborn 267

Breaking C–S bonds with transition metal complexes. A review of molecular approaches to the study of the mechanisms of the hydrodesulfurization reaction
R.A. Sánchez-Delgado 287

Models of surface-confined metallocene derivatives
I.E. Buys, T.W. Hambley, D.J. Houlton, T. Maschmeyer, A.F. Masters and A.K. Smith 309

Heteropolyanions in catalysis
N. Mizuno and M. Misono 319

Designing zeolite catalysts for size and shape selective reactions
D.R. Corbin and N. Herron 343

Thermodynamic and mechanistic studies of initial stages in propane aromatisation over Ga-modified H-ZSM-5 catalysts
E.G. Derouane, S.B. Abdul Hamid, I.I. Ivanova, N. Blom and P.-E. Højlund-Nielsen 371

FT-IR study of hydrocarbon conversion on dealuminated HY zeolites in working conditions
S. Jolly, J. Saussey and J.C. Lavalley 401

Cr^{2+} ions grafted to silica and silicalite surfaces: FTIR characterization and ethylene polymerization activity
A. Zecchina, G. Spoto, G. Ghiotti and E. Garrone 423

Solid-state NMR studies of supported organometallics
L. Reven 447

Application of computer modeling to surface organometallic chemistry
T.B. Shay, L.-Y. Hsu, J.-M. Basset and S.G. Shore 479

Surface organometallic chemistry on zeolites: A tool for modifying the sorption properties of zeolites
A. Choplin 501

Author index (Vol. 86) 513

Subject index (Vol. 86) 515

The scopes of the Elsevier publications *Applied Catalysis* and *Journal of Molecular Catalysis* being complementary, the Editors wish to help the authors submit their papers to the appropriate place. The guidelines are as follows.
Papers dealing with the following subjects should be directed to *Journal of Molecular Catalysis*: catalytic mechanism of reactions at the molecular level, in homogeneous, enzymatic and heterogeneous reactions; mechanistic studies on model heterogeneous catalysts; preparation of catalysts, when dealing with the intervention of organic or organometallic reactions (e.g. insolubilized organometallic complexes and enzymes), new reactions in homogeneous and enzymatic catalysis, even if the mechanism is not elucidated.
Papers dealing with the topics listed below should be directed to *Applied Catalysis*: reactions of industrial interest; deactivation; chemical engineering; preparation of heterogeneous catalysts, when dealing with solid state chemistry and colloidal chemistry; new heterogeneously catalysed reactions of potential interest for applications.
In the case of papers at the borderline, the Editors of *Journal of Molecular Catalysis* and *Applied Catalysis*, in the frame of the coordination between the journals, might be led to suggest to the authors to which journal they could preferably submit their paper.
